****Hospital Training Guide for Pharmacy Students****

Background:

- The purpose of this manual is to furnish students with fundamental clinical pharmacy competencies, with an emphasis on patient interaction, medical record interpretation, and laboratory data analysis across various hospital ward specialties (including internal medicine, pediatrics, surgery, obstetrics, and gynecology). Furthermore, by studying this manual, students will acquire the fundamental clinical pharmacy competencies necessary to oversee patient progress and treatments, as well as evaluate therapeutic results. Furthermore, it equips students with the fundamental clinical pharmacy competencies indispensable in a hospital environment. Students will engage in case observation and discussion highlighting clinical chemists' responsibilities.

Objectives of Guideline:

- Provide an overview of the role of pharmacy within the hospital.
- Explain the importance of interdisciplinary collaboration.
- Familiarize students with the layout of the hospital pharmacy department.

Note: Dear College of Pharmacy-University of Baghdad students, the Hospital training committee will send you the entire material to your official email address when you begin your hospital training course.
